Three-in-one Flowering Additive That Makes Growing Easier

Flowering Enhancer

Flowering Enhancer is a PK additive that also contains calcium and iron. Flowering Enhancer acts as a CalMag reducing the number of additives required. Flowering Enhancer ACTUALLY improves pH stability by over 500% unlike other PK additives.

PK with calcium & iron, improves pH stability 500%

100% organics - kelp, fulvics, vitamins, etc

Ca-Mg-Fe:
Cal-Mag that “bulletproofs” nutrients to pH 9.

System Maintenance:
Prevents bio-films & blockages

Clone Spray:
Promotes growth and accelerates rooting speed

Silica:
Highly concentrated with indefinite shelf-life

FloraMax evolved out of one of Australia’s first hydroponic nutrient manufacturers (est. 1992). Following 25 years of nutrient manufacturing and research, the FloraMax range was conceived from the crop trials and feedback of over 50 industry professionals including highly experienced indoor commercial growers.

We are not your typical nutrient company

1. For ease-of-use, FloraMax packs multiple functions into each product; our 6 core products achieve more than other line-ups over twice the size. With FloraMax, growers do not have to deal with tedious dosing procedures - there is no waiting, simply measure, pour then stir - and the pH stability is over 500% better than other brands.

2. FloraMax is free of dangerous PGR’s and all products have a shelf life greater than 3-years. Also, every batch of FloraMax is manufactured by our in-house chemist.

3. We authored the 88 page FloraMax Hydroponics Manual - widely re-printed by industry publications and grow magazines.

We support grow stores

We supply DIRECT from manufacturer to retailer and enforce MAP pricing. We do NOT supply growers directly, nor permit on-selling via 3rd-party vendor platforms like Amazon or Ebay.

Our development story

We speak from the science

“Compared to the other PK additives, we see a lot more swell when using Flowering Enhancer.”

“Our plants are now a lot stronger and more rigid throughout flowering.”

“We use Flowering Enhancer with our regular nutrient and the improvement in pH stability and solubility was obvious from the outset. There is also no more leaf yellowing from early flower.”

FloraMax is the cleanest line I’ve ever run, white ash, full flavored and not a hint of impurity - that’s what I’m talking about.”

– SoCal Commercial grower (500+ lights)

Soil AB / Coco AB / Hydro AB

All products available in 58 Gal and 265 Gal.

Ca-Mg-Fe: Cal-Mag that “bulletproofs” nutrients to pH 9.

System Maintenance: Prevents bio-films & blockages

Clone Spray: Promotes growth and accelerates rooting speed

Silica: Highly concentrated with indefinite shelf-life

Now available in the U.S. & Canada

The science is real... it’s the cleanest line I’ve ever run, white ash, full flavored and not a hint of impurity - that’s what I’m talking about.”

WE TEACH THE ART OF GROWING...

Article excerpt: When growing indoors, higher yields are obtained by training plants into a low, wide and flat canopy. This form promotes more flowering sites, and positions them in the light’s “sweet-zone”... This form can be achieved through a combination of “topping” followed by Low Stress Training (LST)...
