

Flowered by FloraMaX

"The science is real...
it's the cleanest line I've ever run, white ash,
full flavored and not a hint of impurity -
that's what I'm talking about..."
- SoCal Commercial grower
(500+ lights)

Now available in the U.S. & Canada

Flowering Enhancer

is a PK additive that also contains calcium and iron.
Flowering Enhancer acts as a CalMag reducing the number of additives required.
Flowering Enhancer ACTUALLY improves pH stability by over 500% unlike other PK additives

Root-XS

The industry's best-performing root enhancer

Flowering Enhancer

PK with calcium & iron, improves pH stability 500%

Resin-XS

Increases resin & potency, with no odors or PGRs

OrganaBud

100% organics - kelp, fulvics, vitamins, etc

Three-in-one Flowering Additive That Makes Growing Easier

Our development story

FloraMax evolved out of one of Australia's first hydroponic nutrient manufacturers (est. 1992). Following **25 years** of nutrient manufacturing and research, the FloraMax range was conceived from the crop trials and feedback of over **50 industry professionals** including highly experienced indoor commercial growers.

We are not your typical nutrient company

1. For ease-of-use, FloraMax packs multiple functions into each product; our 6 core products achieve more than other line-ups over twice the size. With FloraMax, growers do not have to deal with tedious dosing procedures - there is no waiting, simply measure, pour then stir - and the pH stability is over 500% better than other brands.
2. FloraMax is free of dangerous PGR's and all products have a shelf life greater than 3-years. Also, every batch of FloraMax is manufactured by our in-house chemist.
3. We authored the 88 page FloraMax Hydroponics Manual - widely re-printed by industry publications and grow magazines.

We support grow stores

We supply DIRECT from manufacturer to retailer and enforce MAP pricing. We do NOT supply growers directly, nor permit on-selling via 3rd-party vendor platforms like Amazon or Ebay.

TESTIMONIES

“Compared to the other PK additives, we see a lot more swell when using Flowering Enhancer.”

“Our plants are now a lot stronger and more rigid throughout flowering.”

“We use Flowering Enhancer with our regular nutrient and the improvement in pH stability and solubility was obvious from the outset. There is also no more leaf yellowing from early flower.”

”

Soil AB / Coco AB / Hydro AB

All products available in 58 Gal and 265 Gal.

Ca-Mg-Fe: Cal-Mag that "bulletproofs" nutrients to pH 9.
System Maintenance: Prevents bio-films & blockages
Clone Spray: Promotes growth and accelerates rooting speed
Silica: Highly concentrated with indefinite shelf-life

WE TEACH THE ART OF GROWING...

Article excerpt: When growing indoors, higher yields are obtained by training plants into a low, wide and flat canopy. This form promotes more flowering sites, and positions them in the light's "sweet-zone"... This 'form' can be achieved through a combination of "topping" followed by Low Stress Training (LST)...
