

Growth-XS

Use in week-2 or 3 of veg to accelerate foliage growth and root mass

- Helps reduce veg phase by 1-3 weeks so that plants can be “flipped” sooner. This permits more crop cycles per annum and can provide valuable savings in running costs.
- Helps eradicate stalled vegetative growth.
- pH neutral formulation.
- Does NOT induce foul residues, foaming or odors in the reservoir, nor cause blockages to drippers and filters.
- Dosage: Use for 7-days (maximum) in week 2 or 3 of vegetative phase. Dose at 1ml/L (4ml/Gal).
- **CAUTION:** Organic additive – NEVER use in conjunction with chlorines or peroxides.
- Available in: 250ml // 1L // 5L // 20L // 200L

Revolutionary Organic Compounds

Over half of the FloraMax additives contain organics, but as analytical chemists, we have been able to isolate specific ‘beneficial’ organic molecules and incorporate them into our additives in a direct, purified, and potent form. This enables their concentrations to be optimized for maximum nutrient effect with no negative side-effects. The result is a range of products that produce unique and tangible results without reservoir foaming, build-ups, odors or blockages.

TESTIMONIES

“ I used to flip after week-5. Now I flip after week-3 and the plants look much stronger going into bloom.”

“The effect of Growth-XS was obvious after just 7-days”

“With Growth-XS there is no signs of stretch, and it creates more centre branching and lateral growth”
