

Cloner

Cloning gel for cuttings

FloraMax Cloner is a protective stem dip for treating cuttings prior to planting.

- **Its specialized gel formulation provides a protective coating on the cut-end.** This helps seal the cut and prevent air bubbles from entering the stem tissue. NOTE, FLORAMAX CLONER is a much thinner gel than competing brands. This design feature allows for a higher rate of absorption into the cutting and provides faster results than thicker formulations.
- **Has an indefinite shelf-life and is resistant to drying-out.**
- **Has high resistance to cross contamination and does not go rank in the bottle.**
- Dosage: Predip cuttings prior to planting.
- Available in: 60m // 250ml

“Purified extracted organics” explained

The chemists at FloraMax have been able to deconstruct popular organic ingredients such as kelp, fulvic acid and guano then isolate specific ‘beneficial’ organic molecules. These are then incorporated into our additives in a purified and potent form. Importantly, this enables their concentrations to be optimized for maximum nutrient effect, with no negative side-effects. The result is a range of products that produce unique and tangible results without causing blocked drippers, pH fluctuation, build-up, foaming or odors.

TESTIMONIALS

“The strike rate of our cuttings is so much better with Cloner compared with other gels we have used over the years”

“The Cloner is 100% stable in the bottle. Other brands go hard and rank after been used” ”
