

## Growth-XS

Accelerates vegetative growth

- Helps reduce veg phase by 1-3 weeks so that plants can be “flipped” sooner. This provides valuable savings in running costs and permits more crop cycles per annum.
- Helps prevent transplant and transition shock.
- Helps revive stalled vegetative growth.
- Will not cause internodal stretch when used as directed.
- pH neutral formulation. Does NOT induce foul residues, foaming or odors in the reservoir, nor cause blockages to drippers and filters.
- Dosage: Use at every watering in week-2 of vegetative stage. Dose at 0.5-1ml/L (2-4ml/Gal).
- **CAUTION:** Organic additive – NEVER use in conjunction with chlorines or peroxides.
- Available in: 50ml // 250ml // 1L // 5L // 20L

### “Purified extracted organics” explained

The chemists at FloraMax have been able to deconstruct popular organic ingredients such as kelp, fulvic acid and guano then isolate specific ‘beneficial’ organic molecules. These are then incorporated into our additives in a purified and potent form. Importantly, this enables their concentrations to be optimized for maximum nutrient effect, with no negative side-effects. The result is a range of products that produce unique and tangible results without causing blocked drippers, pH fluctuation, build-up, foaming or odors.

Impact of **Growth-XS** on new growth after 7-days use.

Suncoast Hydroponics & Garden Centre

## TESTIMONIALS

“I used to flip after week-5. Now I flip after week-3 and the plants look much stronger going into bloom.”

“The effect of Growth-XS was obvious after just 7-days”

“With Growth-XS there is no signs of stretch, and it creates more centre branching and lateral growth”

”
